About me:

Passionate problem-solver with a strong foundation in software engineering, AI, and cybersecurity. Eager to apply technical expertise in real-world challenges and continuously learn technologies.

Education

Ruppin Academic Center

Bachelor of Science (B.Sc.) in Computer Engineering - Graduated with Honors.

2020-2024, GPA: 89.

Skills:

Programming languages: C, C++, C#, Java, Python, JavaScript, PHP, SQL.

Development & tools: Data structures, Algorithms, HTML, CSS, .NET, Android studio, Test automation, Computer Science, OOP, REST API, Selenium.

AI & Machine Learning: Deep learning, Machine learning, Artificial intelligence.

Systems & cyber: operating systems, Linux, cloud computing, compilation, cybersecurity.

Soft Skills: Teamwork, Communication, problem solving, time management, fast learning, adaptability, Ownership & Accountability, attention to detail,

Projects:

- TumorSense- Brain Tumor detection application
 - Developed an application that allows users to upload MRI scans for automated brain tumor detection and classification.
 - Implemented a deep learning CNN model to analyze medical images with high accuracy.
 - Built the backend using Python & Flask, integrated model interface, and generated diagnostic results.
 - Focused on usability, accuracy, and real-world medical application.

Languages:

English- fluent, Hebrew- fluent, Arabic: native.
